

# Life cycle sustainability assessment of a residential building project in northeast China

Prof. Yahong Dong

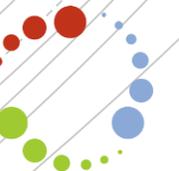

PhD MPhil BSc BEAM Pro

Qingdao University of Science and Technology

# Content

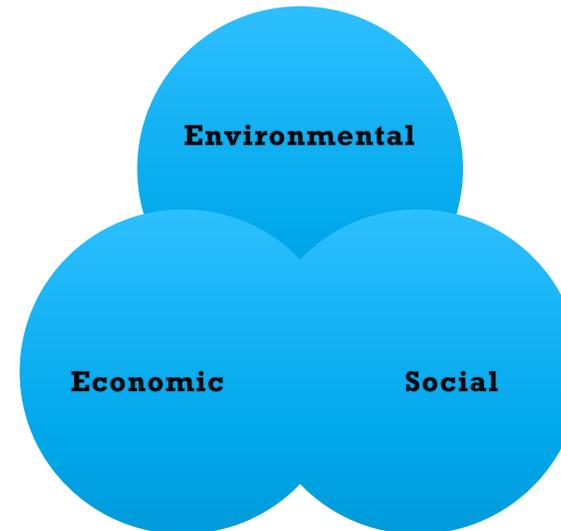

1. Background
2. Methodology
3. Case study
4. Conclusions

# 1. Background

## *Sustainable development:*

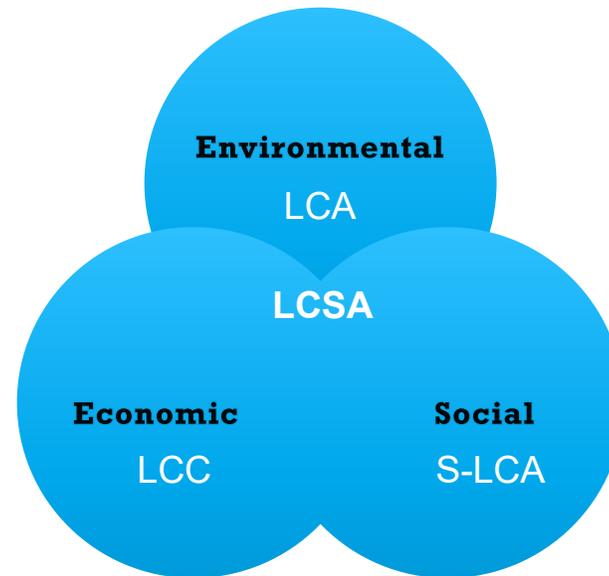

The development that meets the needs of the present without compromising the ability of the future generations to meet their own needs. (Brundtland, 1987)

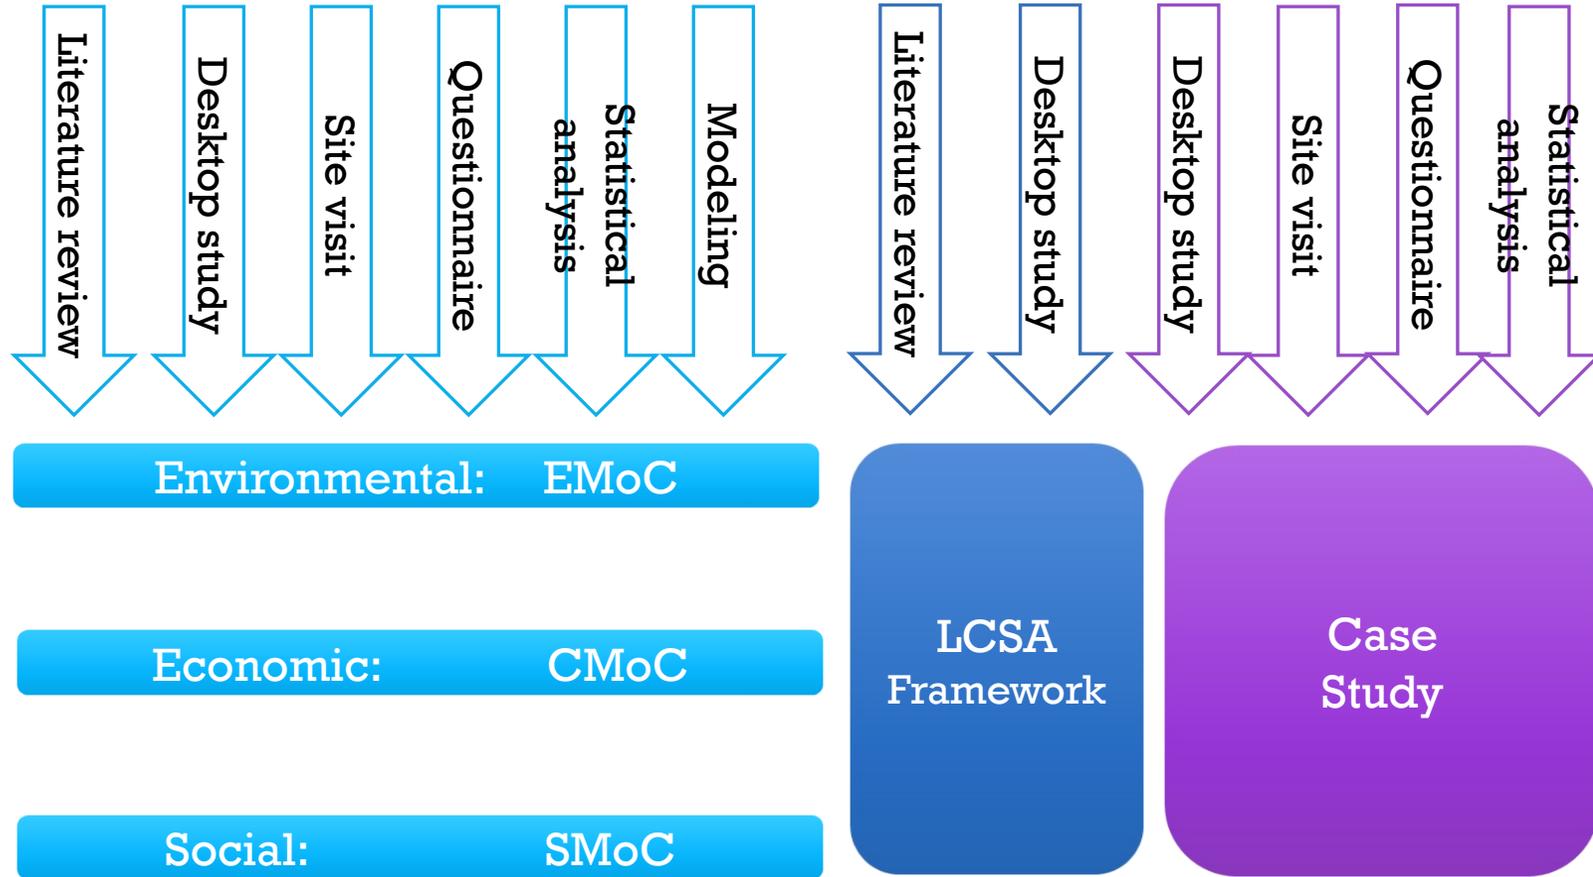

# 1. Background

Life cycle sustainability assessment  
(LCSA)

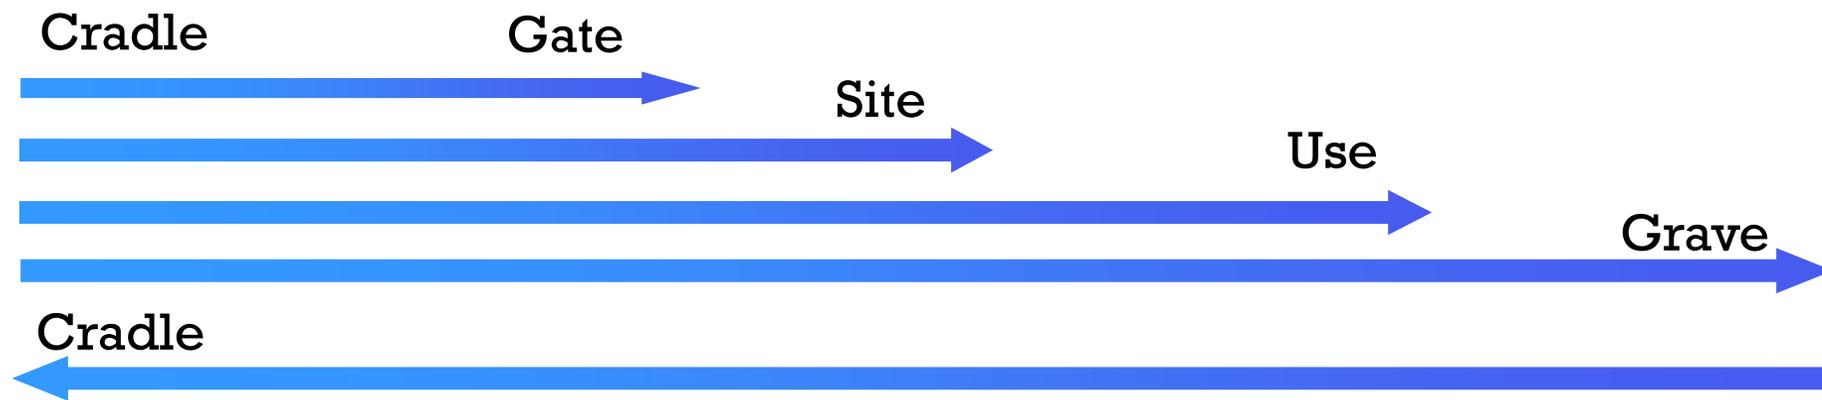

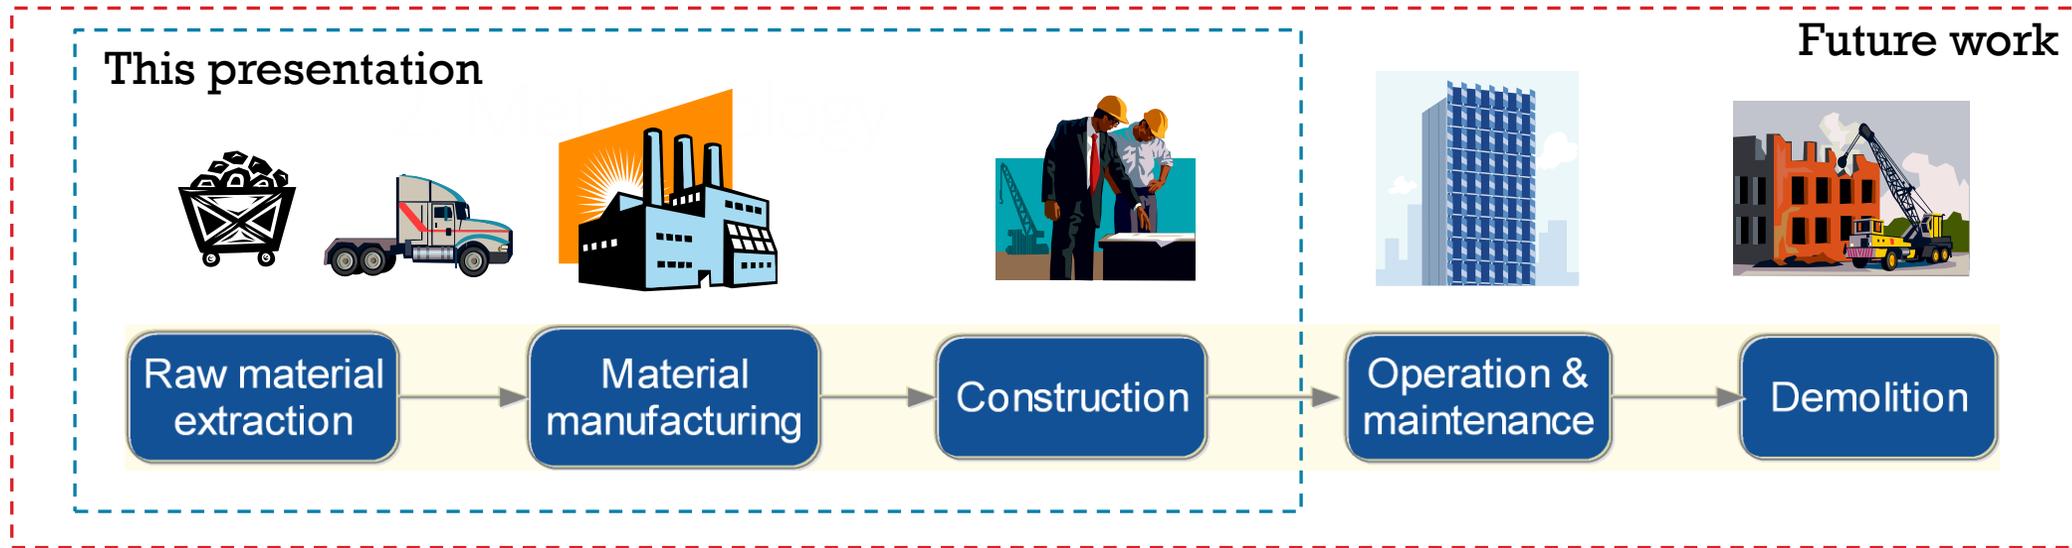

- A conceptual formula of LCSA (Kloepffer, 2008):
- **LCSA = LCA + LCC + S-LCA**
  - **LCA: Environmental life cycle assessment**
  - **LCC: Life cycle costing**
  - **S-LCA: Social life cycle assessment**

# 2. Methodology Research Design

# Environmental Model of Construction (EMoC)

- LCIA: ReCiPe 2008
- UI: Microsoft Excel
- Size: 30 MB

Input Worksheet							
2	Description of items		Input here (if no data, leave as blank)				
3	Respondent						
4	Contact person						
5	Position						
6	Address						
7	Phone No.						
8	Fax No.						
9	Date information collected (dd / mm / yyyy)						
10	General project information						
11	Project name						
12	Project region						
13	Project location						
14	Total gross floor area (m2)						
15	Total site area (m2)						
16	No. of blocks						
17	No. of units						
18	Project start date (dd / mm / yyyy)						
19	Project end date (dd / mm / yyyy)						
20	Total resource consumption during construction						
21	Electricity consumption (kWh)						
22	Diesel consumption (L)						
23	Water consumption (L)						
24	Petrol consumption (L)						
25	Rebar consumption (tonne)						
26	Concrete consumption (m3)						
27	Concrete						
28	Concrete type	C20 (m3)					
29		C30 (m3)					
30		C35 (m3)					
31		C40 (m3)					
32		C45 (m3)					
33	Formwork	Wood (kg)					
34		Steel (tonne)					
35		Steel formwork: Recycle or not					
36	Cast-in-situ concrete	Cast-in-situ/precast ratio (volume)					
37		Waste percentage of concrete (%)					
38	Rebar	Recycle or not					
39		Waste percentage of rebar (%)					
40		Recycle or not					
41		Item	percent(%)	Type	Concrete amount (m3)	Rebar amount (kg)	No. of elements
42		Column					

## Input Worksheet

## 2. Methodology

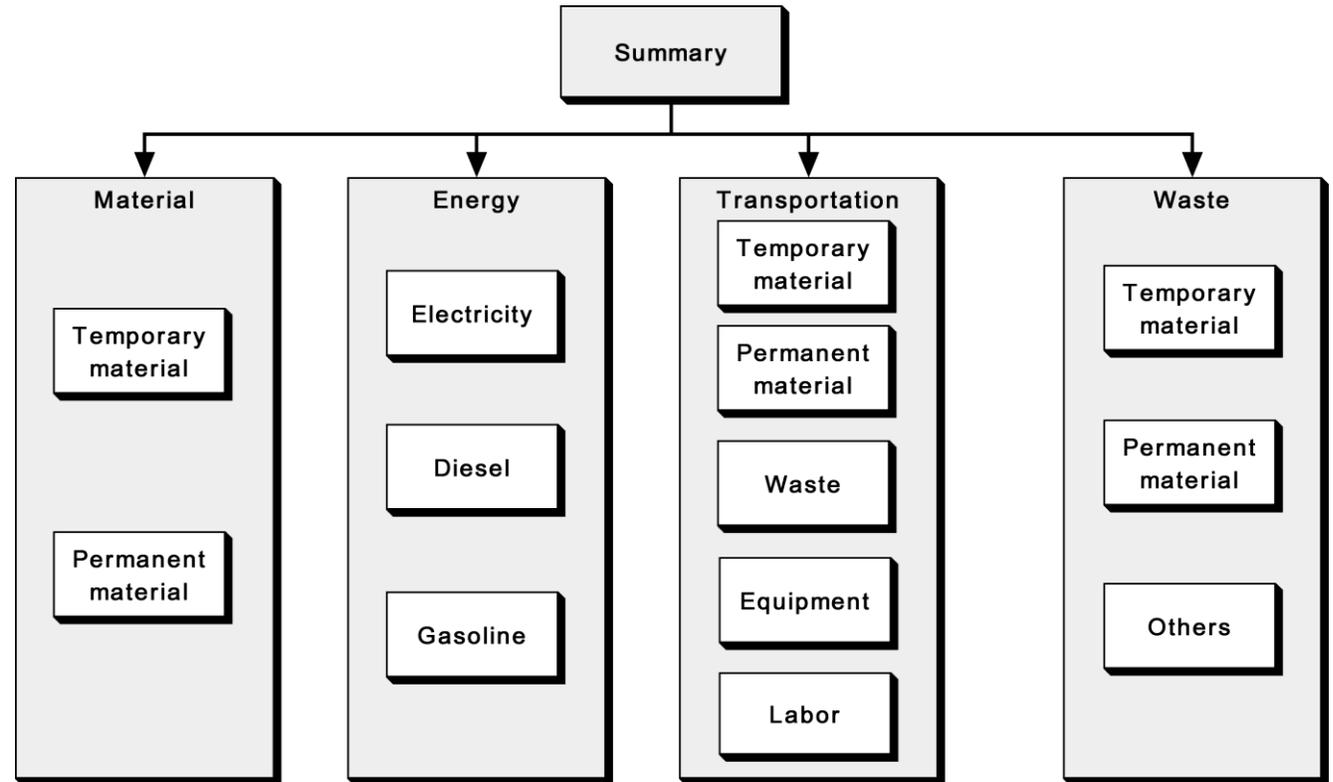

## Environmental Model of Construction (EMoC)

	A	B	C	D	E	F	G
43	Concrete element	Beam					
44		Façade					
45		Semi-precast slab					
46		Staircase					
47		Partition wall					
48		Balcony					
49		Bathroom					
50		Refuse chute					
51		Hanger wall

## 2. Methodology

### Social-impact Model of Construction (SMoC)

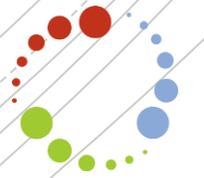

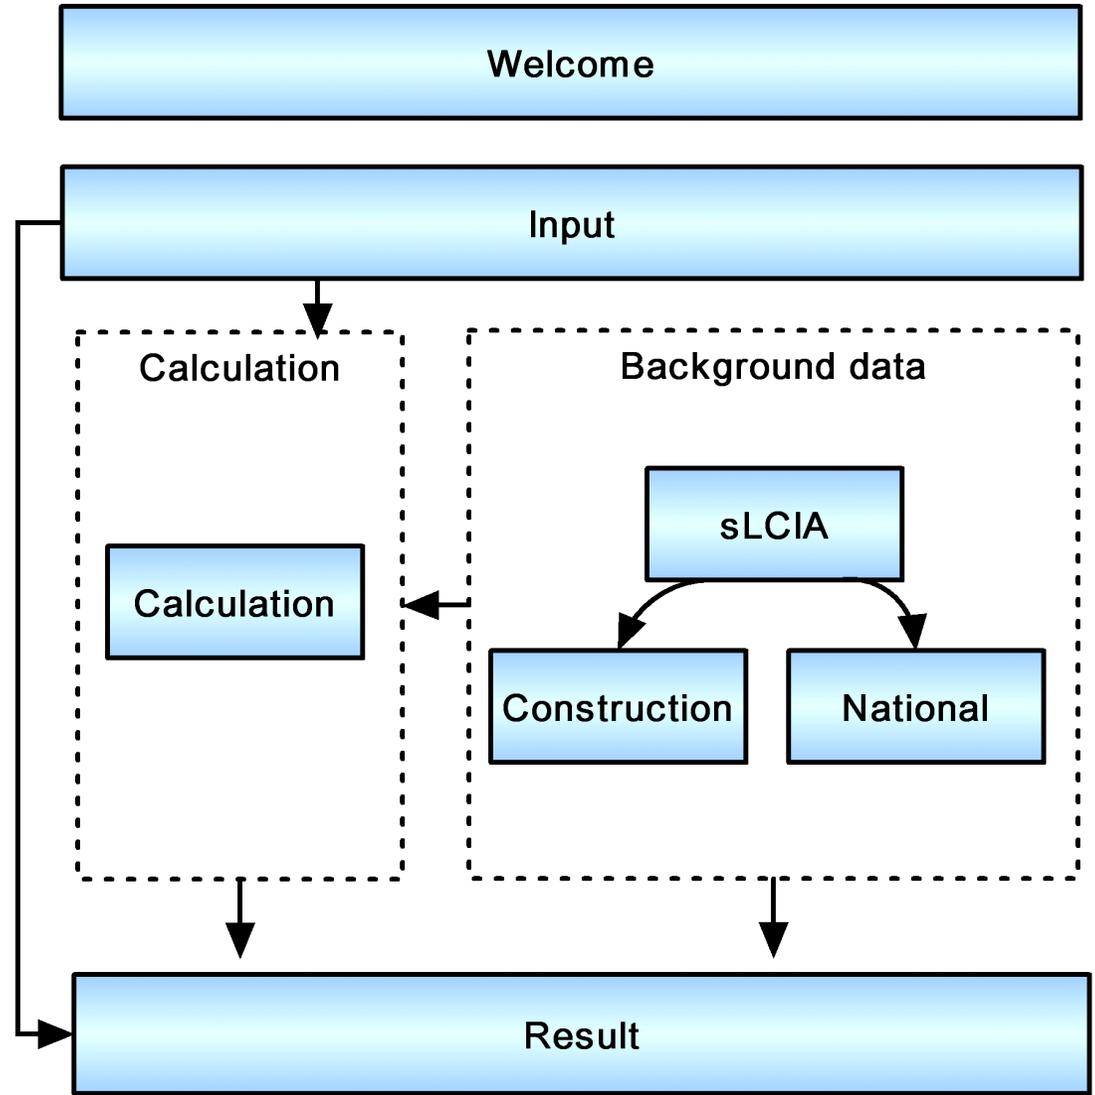

- ❑ Microsoft Excel
- ❑ 7 functional worksheets
- ❑ sLCIA method is used in SMoC
- ❑ Social impacts of on-site practices collected from questionnaire survey are applied as background data in 'Construction Worksheet'

## 2. Methodology

# LCSA Framework

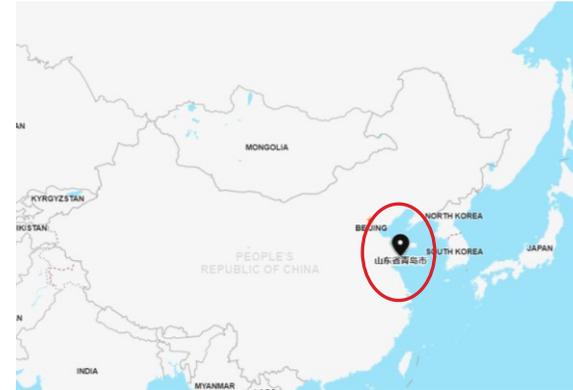

Dong, Y. H., & Ng, S. T. (2016). A modeling framework to evaluate sustainability of building construction based on LCSA. *The international journal of life cycle assessment*, 21(4), 555-568.

## 2. Case Study

Building type: residential building  
Location: Qingdao, China

Construction area: 35,000 m<sup>2</sup>  
No. of apartments: 204  
No. of towers: 2

**THE 10TH INTERNATIONAL CONFERENCE  
ON LIFE CYCLE MANAGEMEN**

### 3. Case study

## Data collection

- Data are collected through a questionnaire.
- Several rounds of consultation were carried out to collect more information.

博士研究课题问卷调查

**A. 关于问卷受访者**

1. 姓名 \_\_\_\_\_ 2. 职位 \_\_\_\_\_  
 3. 联系地址 \_\_\_\_\_  
 4. 联系电话 \_\_\_\_\_ 5. 传真 \_\_\_\_\_  
 6. 问题填写日期 (年/月/日) \_\_\_\_\_

**B. 项目基本资料**

1. 项目名称 \_\_\_\_\_  
 2. 项目地点 \_\_\_\_\_  
 3. 建筑毛面积 (平方米) \_\_\_\_\_ 4. 建筑工地面积 (平方米) \_\_\_\_\_  
 5. 座数 \_\_\_\_\_ 6. 户数 \_\_\_\_\_  
 7. 工程开始日期 (年/月/日) \_\_\_\_\_ 8. 工程结束日期 (年/月/日) \_\_\_\_\_

**C. 施工过程原料消耗**

1. 用电量 (千瓦时) \_\_\_\_\_ 2. 柴油 (升) \_\_\_\_\_  
 3. 水 (升) \_\_\_\_\_ 4. 汽油 (升) \_\_\_\_\_  
 5. 钢筋 (吨) \_\_\_\_\_ 6. 混凝土 (立方米) \_\_\_\_\_

**D. 混凝土**

1. 请写出混凝土各型号的用量:  
 C20 \_\_\_\_\_ 立方米  C30 \_\_\_\_\_ 立方米  C40 \_\_\_\_\_ 立方米  
 其它 ( ) \_\_\_\_\_ 立方米  其它 ( ) \_\_\_\_\_ 立方米

混凝土构件	*方法	混凝土型号	**混凝土总量 (平方米)	**钢筋 (千克)	混凝土件的数量 (个)
柱	现浇 _____ %				
	预制 _____ %				
梁	现浇 _____ %				
	预制 _____ %				
外墙	现浇 _____ %				
	预制 _____ %				
板	现浇 _____ %				
	预制 _____ %				
楼梯	现浇 _____ %				
	预制 _____ %				
间隔墙	现浇 _____ %				
	预制 _____ %				
阳台	现浇 _____ %				
	预制 _____ %				
浴室	现浇 _____ %				
	预制 _____ %				
其它:	现浇 _____ %				
	预制 _____ %				
其它:	现浇 _____ %				
	预制 _____ %				
其它:	现浇 _____ %				
	预制 _____ %				

\* 各层百分比  
 \*\* 混凝土总量，是指，例如，该项目所有柱所用的混凝土量

6. 预制混凝土在什么方面可以减少建筑工程的环境影响:  
 废料减少  噪声减少  物料减少  其它: \_\_\_\_\_

7. 使用预制混凝土的缺点有: \_\_\_\_\_

# Input data

**Table 3**  
Data collection of the residential building project.

Stage	Module	Item	Amount	Unit	Source
Product	A1-A3	Concrete	19,000	m <sup>3</sup>	Project manager
		Brick	5,200	kg	Project manager
		Aluminum	12,000	m <sup>2</sup>	Project manager
		Cement	60,000	kg	Project manager
		Plaster	15,000	kg	Project manager
		Steel	2,750	Ton	Project manager
Construction	A4	Transport ready mix	5	Km	Project manager
		Transport steel	10	Km	Project manager
		Transport brick	25	Km	Project manager
	A5	Electricity	225,000	Kwh	Project manager
		Diesel	1,000	L	Project manager
		Water	20,000,000	L	Project manager
		Gasoline	6,800	L	Project manager
		Electricity	188.4	kWh/p*yr	National Bureau of Statistics
Use	B6	Natural gas	20	m <sup>3</sup> /household*m	National Bureau of Statistics
		Water	181	L/p*day	Ministry of Water Resources

# Model Results- Social Impacts

Characterization results are between  
-1 to 1.

1 is the best performance.  
-1 is the worst performance.

Social Impact Characterization

■ 1 Freedom of association and collective bargaining	-0.841280879
■ 2 Child labor	0.445878866
■ 3 Fair salary	0.82858335
■ 4 Working hours	0.81588582
■ 5 Forced labor	-0.303017749
■ 6 Equal opportunities/discrimination	0.155558646
■ 7 Health and safety	0.712213723
■ 8 Access to material resources (e.g. sanitation, school)	0.265081793
■ 9 Cultural heritage	0.025395059
■ 10 Safe / healthy living conditions	0.406861602
■ 11 Community engagement	0.236498444
■ 12 Local employment	0.854448308

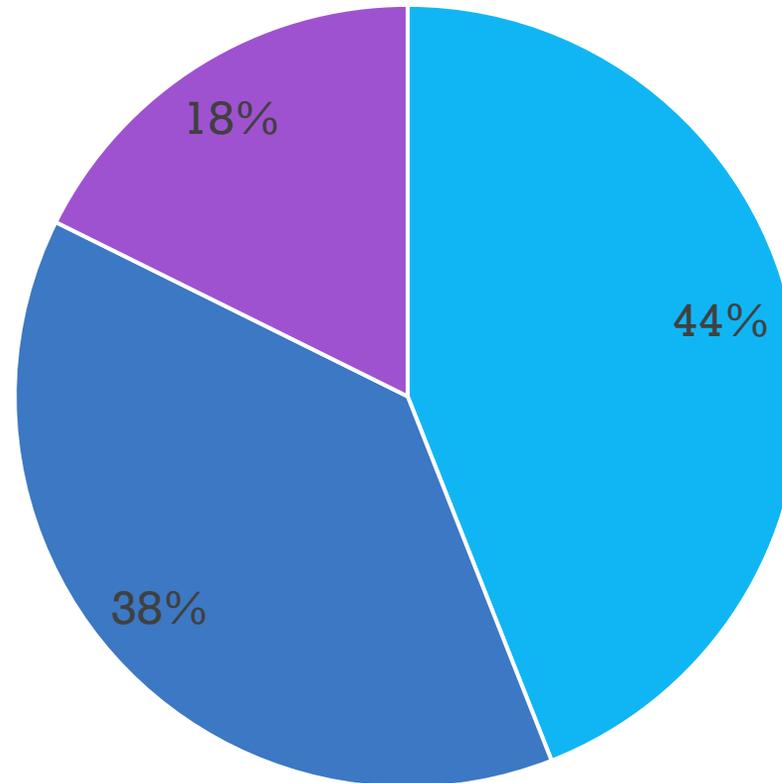

# Model Results- Social Impacts

## Single Score

Social single score: 1.44

■ Worker ■ Local Community ■ Society

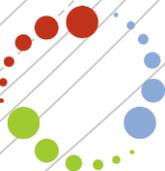

Single score results are from -5 to 5.

5 is the best performance.  
-5 is the worst performance.

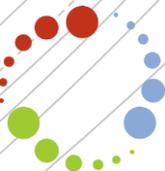

## Conclusions

- The studied building has **290 kg CO2 eq/m2**.
- The **normalization results** show that marine toxicity, human toxicity and freshwater ecotoxicity are most influential impact categories.
- Endpoint results show that **Human health** and **Resources** are more impacted by the project than ecosystem.
- **External costs** are much larger as compared to the construction costs.
- **Social single score is 1.44**, indicating the social impacts of this project is positive.
- The project has more impacts to Worker and Community than to the Society.

# Conclusions

- **Future work:**
  - **To study the downstream stages of the building project, including use, end-of-life.**
  - **To conduct more case studies of LCSA.**

Thank you!
